

Technical Diploma in Applied Public Health Emergency Management

Description

Public health emergencies continue to place significant pressure on health systems worldwide. Disease outbreaks, humanitarian crises, natural disasters, and mass gatherings require professionals who can assess risks, coordinate response efforts, and support resilient health systems.

The Technical Diploma in Applied Public Health Emergency Management is a comprehensive three-month program designed to equip participants with the knowledge and practical competencies needed to prepare for, respond to, and manage public health emergencies in complex and resource-limited settings.

The diploma integrates emergency management principles, emergency response interventions, humanitarian coordination and action, public health tools and techniques, risk assessment and management, and risk communication into one structured learning journey. By the end of the program, participants will be prepared to support emergency preparedness efforts, conduct rapid assessments, strengthen coordination mechanisms, and contribute to evidence-based decision-making during public health emergencies.

Program Details

Duration:
3 Months

Language:
English

Fees:
USD \$375

Objectives

By the end of this diploma, participants will be able to:

- » Apply the principles and concepts of public health emergency management
- » Conduct risk assessments and develop risk management plans
- » Design and support emergency preparedness and response plans
